Viewer 50-Pack: 50 Viewers	kr 49.995
Viewer 100-Pack: 100 Viewers	kr 69.995

Payment: Due in advance in DKK.

Requirements:

Connector: A Navision Connector license is required for each separate Navision License number/Database Server. The Navision license number appears in the Jet Reports license file. Jet Reports provides license compliance support for Connectors by verifying that the license number on the server matches the license number in the Jet License file. If the database connection is local, the local license file number is checked. Jet Reports for Navision may be used with two different servers with the same license number as long as the servers are in compliance with Navision license terms. (Typically one is a production server and the other is a development server.)

Viewer: A Viewer is required on each computer in order to view or design reports. When connecting via terminal services, a Viewer license is needed for each connecting computer just like an Excel install on the server requires an Excel license for each computer connecting to the terminal server. A Viewer is required on each computer used by a Designer. The current version of Jet Reports does not offer Viewer license compliance support features. Customers must self manage compliance to Viewer license terms.

Designer: A Designer is a person whose name appears in the License file. Only people whose names appear in the license file may use the designer features. Jet Reports offers moderate license compliance supports by checking that the user name in Excel matches the name in the license file before allowing design features. A Viewer license is required to use design features.

Versions: Jet Reports for Navision requires C/FRONT, Navision version 1.2 or later, and Microsoft Excel 2000 or XP. Navision version 3.01b or higher executables are required for drilldown features.

License File: Jet Reports requires a license file. The license file must be in the Jet Reports program directory and have the same name as the Navision license number with a “.JLF” extension. To request a license file, email the customer’s Navision License file and a list of Licensed Designers to orders@jetreports.com.

Sessions: Jet Reports requires a Navision session while calculating. If Navision is already open on the computer, Jet Reports requires an additional session during calculation. Jet Reports can be configured to release the session once calculation is complete. Some companies may require additional Navision sessions to use Jet Reports.
